

Historical Artifacts / Ruins

Our main goal in our electrical installation and lighting solutions for historical monuments and ruins is to protect and emphasize our cultural heritage. In these projects that require sensitivity, we keep energy efficiency and electrical safety standards at the highest level and use special technologies that will not harm the authenticity of the artifacts. With LED-based lighting systems and remotely monitored energy management systems, we protect the traces of history, enrich the visitor experience and minimize energy consumption.

DÖSIMM MONITORING CENTRE

In this project, which we implemented in Ankara Dösimm Headquarters Building, a monitoring centre was created by integrating 30 videowalls on oval construction profiles specially prepared for the project. The purpose of the monitoring centre we have established is to ensure the control of the box office management and turnstile access systems of all museums affiliated to the Ministry of Culture and Tourism.
